

Imont Launches New Cloudless and Hubless Demo at CES 2019

7 January 2019

Imont Technologies Limited

Revolutionary technology to allow organizations to build and deliver their own cost effective and secure IoT solutions.

Imont Technologies Limited, the provider of highly scalable, distributed next generation device connection software for smart home and smart industry, today announced it will be showcasing their innovative "cloudless" IoT technology on set top boxes (STB) during CES 2019 in Las Vegas. Imont's pre-configured IoT software toolkit connects devices from many manufacturers, using different protocols and allows these to be coordinated locally and remotely without reliance on expensive standalone hubs and cloud services.

Imont partners with an array of software and hardware vendors to provide system providers with not only an end-to-end IoT system, but one that is completely reliable, scalable, secure and cost effective. Using a truly distributed edge-compute framework with our partner's devices and software, IMONT will be demonstrating smart home control using the TV remote and smart phone.

Larry Poon, IMONT's Chief Operating Officer, commented:

"We are excited to be exhibiting at CES in the UK Pavilion this year and showing for the first time our software working on a STB. Controlling one's home on the big screen using the TV remote in addition to a smart phone is what our customers have been asking for, and now we can offer this. Imont firmly believes that providing the flexibility to control devices without using a standalone hub and the cloud will provide the affordable and secure IoT system that the market demands."

About Imont

Imont develops software for IoT device integration using a "cloudless" technology that delivers economic and security benefits for scaling smart home, smart city and smart industry projects. Our next generation IoT software connects devices from many manufacturers, using different communications standards. Our software allows these devices to be integrated so that they interoperate seamlessly, regardless of whether they are local or remote without reliance on expensive cloud services. www.imont.io CES 2019 - Sands Expo, Eureka Park, Hall G, UK Pavilion - booth 51441
