

# Successful IoT systems require collaboration by an ecosystem of technology providers.

D-Link has teamed up with Silicon Labs, IMONT and Skelmir to allow organizations to build their own IoT solutions.

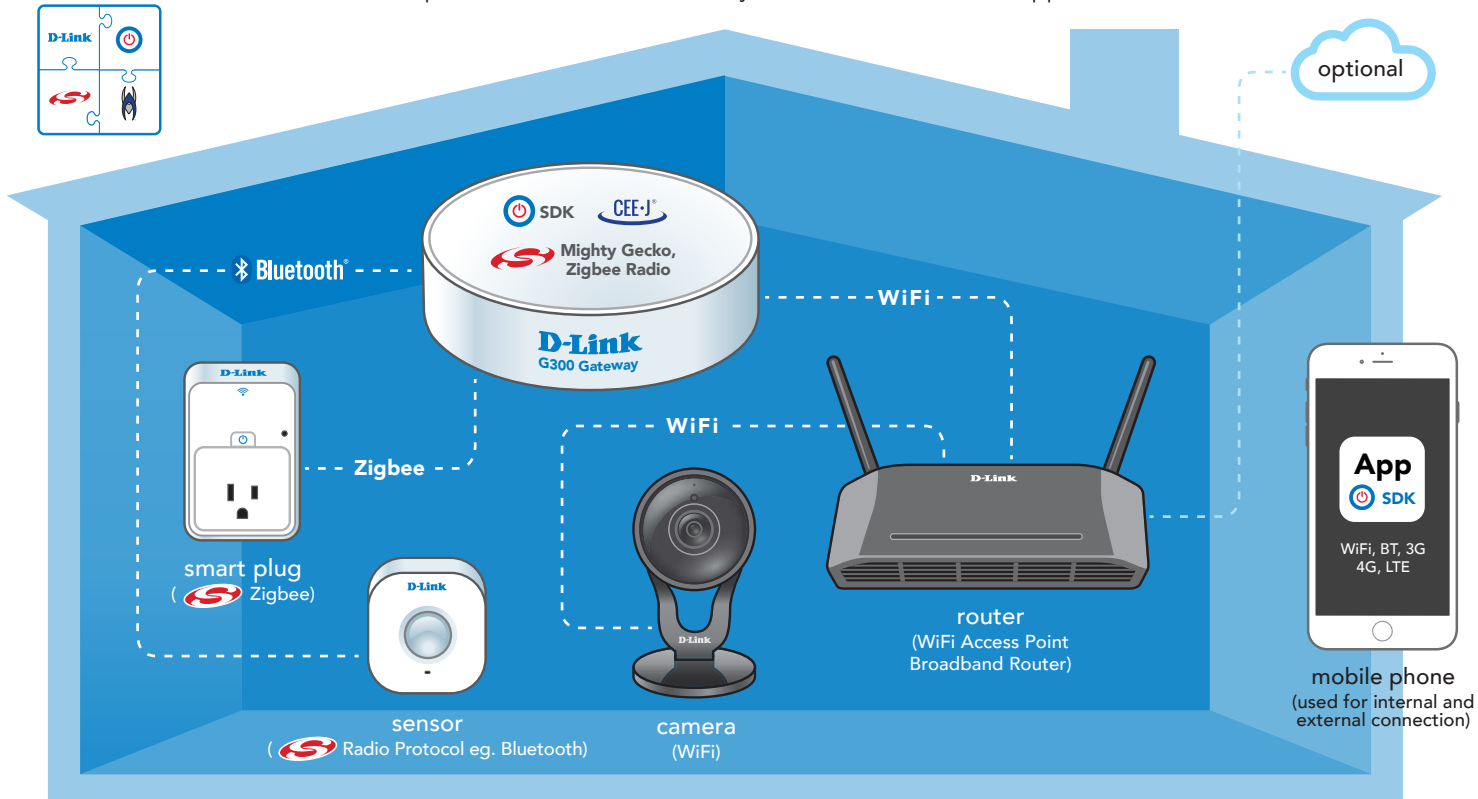

*Our end-to-end ecosystem for the Internet of Things creates advantages and value.*

- **Increased Speed to Market** - Pre-configured smart home software toolkit.
- **Interoperability** - Connect across various protocols and manufacturers.
- **Cost Efficient** - No expensive hubs, minimal monthly cloud infrastructure bills.
- **Increased Security** - Each home has unique security keys. No cloud means no way to compromise all homes centrally.
- **Scalable** - Each home runs independently without central support.
- **Maximum Privacy** - No data needs to leave the home for it to operate.
- **Reliable** - Doesn't rely on any infrastructure outside the home so mass outages are highly unlikely.
- **Resilience** - Multiple peers co-operate and support each other.
- **Fast Response Time** - No round trips to the cloud.

# An Ecosystem for the Internet of Things (IoT)

D-Link collaborates with partners to provide a comprehensive Internet of Things ecosystem that enables the development of seamless industry “smart” solutions and applications.
